

TESLA-COIL 2MTC

Description

The Tesla coil 2MTC is a solid-state Tesla coil capable of audio play back between the range of approximately 50 and 600 Hz. The sound generated can be up to approx. 100 dB. The potential „lightning flash“ emitted can reach up to 2.5 meters in length. A phase shift can be performed by using two identical 2M Tesla coils. The phases of both coils are moved relative to one another in order to form a combined lightning flash between them. This function can be switched on and off when the Tesla coil is in operating mode.
